# How to configure Cryptocurrencies data plugin for AmiBroker step by step
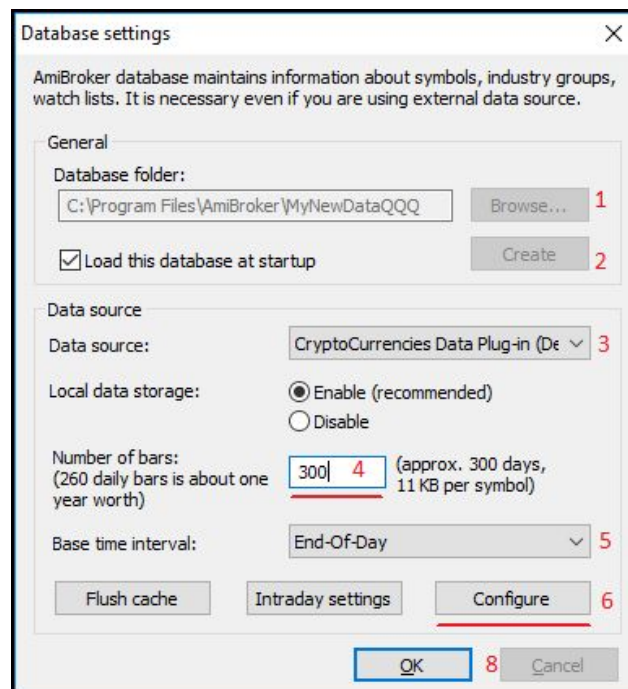

1. Download AmiBroker from official web site and install it.
2. Run AmiBroker for first initialization and then close it.
3. Download and install CryptoCurrencies Data Plug-in.
4. Run the AmiBroker.
5. The window is bring up. Click OK button.

6. Click File -> New -> Database
7.

8. In Database settings window you must complete the next steps:

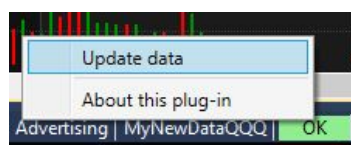

a. Select database folder (pos 1) for store data;
b. Create database by pressed Create button (pos 2);
c. Select CryptoCurrencies Data Plug-in from list (pos 3);
d. Enter Number Of Bars (pos 4).

Note: This number of last bars from current date/time. for example if you using End-of-Day base time interval and enter number of bars equal 300 - this will show the bars for last 300 days.
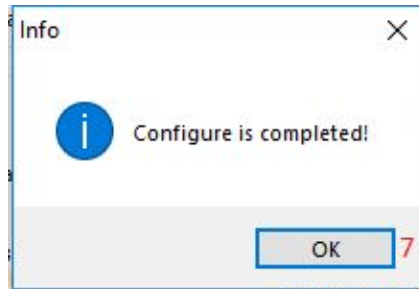

e. Select the base time interval (pos 5).

Note: 1 minute, 5 minute, 15 minute, Hours and End-Of-Day only available.
Note: The AmiBroker is Autoupdate bars automatically. The refrash time is based on selected intervals, for example if selected 1 minute base time interval - amibroker will update data each 1 minute, if selected 15 minutes - each 15 minutes and so on. If you have manual update data feed just click right mouse button on green square area in status bar and select **Update data**;

f. **YOU MUST** to click the **CONFIGURE** button (pos 6) to add symbols to market lists of AmiBroker! The information window is pop up. Click OK (pos 7) into it.

g. The next step is click OK button into Database settings (pos 8);

8. At the top left side of AmiBroker you will see the Symbols pair and Markets. Click for selected market pair will get the data feed for selected pair:
